

Lawn Shaper

Challenges Faced:

- Developing the logic to handle gardener booking and availability took considerable effort.
- Data filtering and dynamic updates on the dashboard—especially for mobile views—were technically challenging.
- Integrating the payment gateway and testimonial/feedback systems made the component structure quite complex.

Future Improvements:

- GPS/location-based gardener suggestions could be introduced.
- A real-time chat or inquiry system could simplify communication.
- The admin panel can be improved with gardener performance tracking, earnings reports, and a complaint handling system.
